

Figure 1

Figure 1 shows a series of vertical bars representing the distribution of different types of vegetation across various regions. The x-axis lists several regions: North America, Europe, Asia, Africa, Australia, South America, and Antarctica. The y-axis represents the percentage of total area covered by each type of vegetation. The legend indicates six categories: Forest (dark grey), Grassland (medium grey), Desert (light grey), Tundra (white), Wetland (diagonal lines), and Shrubland (cross-hatch). The chart illustrates how different vegetation types are distributed globally, with Forest being prominent in North America and Europe, and Desert being prevalent in Africa and Australia.
